

Q4 FY26 Highlights

TCS reported steady revenue growth of 6% year-on-year in constant currency terms. The BFSI vertical showed resilient demand, while the Retail and Consumer Business Group vertical experienced softer discretionary technology spending during the quarter.

The company announced a share buyback program, reflecting continued strong free cash flow generation and a disciplined approach to capital allocation.

Deal Pipeline and Margins

The order book remains healthy, though management noted that the pace of deal ramp-up has been gradual amid a cautious global demand environment. Operating margin was broadly stable quarter-on-quarter at 24.1%.

Management reiterated a measured, watchful outlook for the coming fiscal year, citing macroeconomic uncertainty in key overseas markets as a factor tempering near-term growth acceleration.
